## Data Systems: Where and How to Store Your Data

July 15, 2015, 12:00 PM – 1:00 PM

Ever feel like you're entering lots of info into forms and assessments, but not getting anything useful out of them? In this event, Sarah McCruden will explore different options for data storage systems and solutions for those who seek to streamline their data collection and storage processes. This learning session will focus on selecting the best software for your specific needs and organizing your program data.

### **Who Should Attend**

This program is a must for anyone interesting in improving their data collection, storage and reporting processes. Whether your current data solution is an unmanageable database, or you're still working from paper records and keeping count in your head—we can help you work towards a better solution for your program.

### **What You Will Learn**

Educate yourself on the different data solutions available to your program, and learn how to better organize and report on data within the constraints of your current software

### **Who Will Help You Learn**

#### Sarah McCruden, BA

Sarah McCruden, B.A., helps clients to get the most out of the data they collect. Since graduating from Johns Hopkins University in 2009, she has gained extensive experience in designing, building, and providing ongoing support in developing Microsoft Access databases, as well as providing support and technical assistance to clients using Social Solutions' Efforts to Outcomes (ETO) software. In addition to writing SQL-based database queries and creating quarterly and monthly aggregate reports for many of CRC's clients, Sarah specializes in helping organizations select a data storage system that will work best for their individual needs, and provides guidance in developing those systems as they grow. Ms. McCruden is also a dragon taming data sorceress.
